Professional Summary

Data Analyst with hands-on experience in Python, Tableau, and Excel, focused on transforming raw datasets into actionable business insights. Skilled in data cleaning, exploratory data analysis, and building interactive dashboards to uncover trends and support data-driven decision making.

EDUCATION

Bachelor of Technology (Artificial Intelligence) Newton School of Technology, Rishihood University Grade: 7.1/10.0	2024 – 2028
Intermediate (Class XII) Kendriya Vidyalaya Shalimar Bagh Grade: 74%	2022 – 2023

PROJECTS

US Housing Market Analysis & Price Prediction ([Github](#))

Tools: Python, Tableau

- Performed end-to-end data cleaning and preprocessing on US housing datasets using Python, handling missing values, inconsistencies, and feature transformations.
- Conducted exploratory data analysis to identify key factors influencing housing prices, including bedrooms, price per square foot, and geographic location.
- Built an interactive Tableau dashboard to visualize housing trends, regional price variations, and listing distribution across multiple states.
- Developed KPI-driven insights including average price, price per square foot, total listings, and bedroom distribution.
- Implemented geospatial analysis using maps to highlight state-wise pricing differences and regional trends.
- Analyzed top cities and brokers to identify high-value markets and key contributors to housing activity.
- Created visualizations for price distribution, time-based trends, and weekday vs weekend listing behavior.
- Generated predictive insights to estimate housing prices and support data-driven decision making in real estate.

Cafe Sales Analytics Dashboard ([Github](#))

Tools: Excel, Power Query

- Analyzed 10,000+ transaction-level records from a retail cafe dataset to identify sales trends and customer behavior patterns.
- Performed data cleaning and transformation using Power Query, handling missing values and creating derived features such as product categories.
- Designed an interactive Excel dashboard to track key KPIs including total revenue, total transactions, quantity sold, and average order value.
- Identified high-performing products contributing to majority of revenue and optimized product-level insights.
- Conducted category-wise analysis to determine contribution of drinks, food, and bakery items to overall sales.
- Analyzed monthly sales trends to detect fluctuations and identify opportunities for targeted promotions.
- Evaluated customer behavior through order type (takeaway vs dine-in) and payment method analysis.
- Generated actionable business recommendations to improve sales performance, increase average order value, and optimize operations.

SKILLS

Languages: Python, SQL

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Analytics: Data Cleaning, EDA, Data Visualization, KPI Analysis, Dashboard Design

Tools & Platforms: Excel, Power Query, Tableau, Jupyter Notebook
