

Arhan Alam

Data & Visualization Analyst | B.Tech Computer Science — Newton School of Technology
+91 96857 93878 | arhan.alam2024@nst.rishihood.edu.in | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Aspiring Data & Visualization Analyst with hands-on experience in end-to-end analytics — raw data cleaning, feature engineering, KPI framework design, and interactive dashboard creation. Proficient in Google Sheets, Tableau, Python (Pandas), and SQL for data analysis and storytelling. Skilled in translating complex datasets into actionable business insights for financial and real estate domains.

SKILLS

Data Analysis: Google Sheets (Pivot Tables, COUNTIFS, Slicers, Conditional Formatting), Python (Pandas), SQL, Tableau Public

Analytics Methods: EDA, KPI Framework Design, Risk Segmentation Modelling, Feature Engineering, Data Storytelling

Programming: JavaScript, Python, HTML, CSS, SQL

Soft Skills: Critical Thinking, Teamwork, Decision-Making, Time Management

EDUCATION

B.Tech — Computer Science

Rishihood University, Newton School of Technology

2024 – 2028 | GPA: 8.714 / 10.0

Intermediate (Class XII)

Royals Academy School, Kota

2023 – 2024 | 90.0%

Matriculation (Class X)

Christukula Mission Hr Sec School, Satna

2021 – 2022 | 91.0%

DATA & VISUALIZATION PROJECTS

Loan Default Risk Analysis & Applicant Risk Segmentation

Jan 2025 – Apr 2025

Role: Data Lead | Tools: Google Sheets, Python (Pandas), Pivot Tables, COUNTIFS/AVERAGEIFS

Links: [GitHub](#) | [Live Dashboard \(Google Sheets\)](#)

- Cleaned and engineered 14,699 consumer loan records across 8 variables — created 6 derived features (Default_Flag, DTI_Risk_Category, Income_Bracket, Risk_Score) and standardised all categorical fields for analysis.
- Built a 3-tier Borrower Risk Segmentation Model (Low / Medium / High) using credit grade, DTI, and income; identified that Grade E–G borrowers (11.4% of portfolio) drive over 50% of all defaults, enabling projected default rate reduction from 14.88% to 9–10% — saving ~\$7.1M.
- Designed an interactive Google Sheets KPI dashboard with 7 dynamic charts, real-time slicers across 4 dimensions, and pivot tables powered by COUNTIFS/AVERAGEIFS — surfacing that DTI >35% borrowers default at 3x the rate of low-DTI peers.

US House Price Analysis — Regional Market Intelligence Dashboard

Feb 2025 – Apr 2025

Tools: Tableau Public, Google Sheets | Sector: Real Estate

Links: [GitHub](#)

- Analysed 11,410 US property listings across 10 states — identified California as the dominant market (24.07% of listings, avg price \$1,157,962) and Paradise Valley, AZ as the highest-priced city at ~\$15M average.
- Built a multi-view Tableau Public dashboard featuring 4 KPI cards, a choropleth State Price Map, Top-10 Cities bar chart, and Avg Price/Sqft by State chart — enabling side-by-side regional price benchmarking.
- Implemented interactive state-filter slicers allowing drill-down across price, sqft efficiency, and bedroom count, delivering actionable market intelligence for real estate investment and pricing strategy decisions.
